How this document is used. This is the single source of truth for what CEven is and does. Every ticket raised for design or engineering should trace back to a section in this document — a screen, an acceptance criterion, a data rule. Sprint and release scheduling are tracked separately in the issue tracker; this document defines *what* gets built, not *when*. Where this document and a visual mockup disagree, this document wins — mockups illustrate intent, they are not the spec itself.

1. Product Overview

1.1 Vision

CEven is a world-class, AI-first crèche management ERP built for Nigerian early-years childcare businesses. It replaces paper registers, WhatsApp groups, manual fee tracking, and spreadsheets with a single operating system that runs every aspect of a crèche — from daily child welfare logs, to staff payroll, to regulatory compliance, to parent communication.

1.2 Core Value Propositions

- **Everything in one place** — attendance, welfare, billing, staff, and compliance in a single platform.
- **AI-powered operations** — "Ada," the embedded AI assistant, surfaces insights, auto-assigns tasks, and drafts communications before staff know they need them.
- **Built for Nigerian crèches** — Naira-native billing, local compliance frameworks, Paystack-powered payments, SMS-first parent communication.
- **Designed for non-technical operators** — crèche managers and owners, not IT departments.

1.3 Product Scope

PLATFORM	WEB ADMIN APP, DESKTOP-FIRST AT 1440×900PX; COMPANION MOBILE APP FOR PARENTS
Primary users	Crèche owners, managers, lead caregivers, receptionists, finance staff
Monetisation	Two distinct revenue streams — see §5 (Billing & Monetization Model)
AI differentiator	"Ada" — an embedded AI persona generating daily briefs, welfare flags, payment risk scores, and communications
Parent interaction	Via companion parent app and SMS — parents never access the CEven admin app directly
Currency	Nigerian Naira (₦), all amounts stored as integers in kobo
Notifications	In-app, push notifications, and SMS

2. User Personas

Five distinct roles interact with CEven. The product must serve each of them without privileging one over another.

Crèche Manager

Description: Day-to-day operational lead. Uses the system daily to manage staff, review AI insights, chase outstanding payments, and handle incidents. The primary power user. **Goals:** Reduce admin time to focus on children · Catch welfare, compliance, and payment issues before they escalate · Run payroll accurately without calling an accountant. **Pain points (pre-CEven):** Hours spent on WhatsApp chasing caregivers for daily logs · No visibility on who has paid without calling parents · Compliance expiry dates tracked in a spreadsheet nobody checks. **Primary screens:** Dashboard, Staff, Payroll, Leave Management, Tasks, Compliance, AI Command Center, Analytics.

Caregiver / Room Lead

Description: Frontline caregiver for a specific room. Submits daily logs, confirms medication, and raises incidents. Typically operates from a tablet in the room. **Goals:** Submit daily logs quickly without leaving the room · See the day's medication schedule clearly each morning · Flag welfare concerns without paperwork. **Pain points:** Paper logs go missing or arrive late · No easy way to flag a change in a child's mood · Medication schedule relies on verbal handovers. **Primary screens:** Daily Logs, Medication, Health & Incidents, Child Profile, Notifications.

Admin / Receptionist

Description: Manages the front desk — check-in/check-out, billing, parent communications, and enquiries. Primary user of the QR check-in station. **Goals:** Fast, error-free check-in during busy morning drop-off · Send and track invoices without needing a child's full history · Quickly log enquiries and manage the waitlist. **Pain points:** QR scanner failures with no clear fallback · Parents calling about invoices they can't locate · Enquiries tracked in a physical notebook. **Primary screens:** Reception / QR, Billing, Parents, Enrolment & Waitlist, Announcements, Messages.

Owner

Description: Reviews financial performance, compliance status, and AI reports. Lower frequency, high-stakes — needs executive clarity. **Goals:** Know at a glance whether the business is profitable · Ensure compliance is never a legal liability · Have AI flag risks before they become crises. **Pain points:** No single view of revenue, costs, and outstanding fees · Compliance records scattered across filing cabinets · Learning about incidents days after they happened. **Primary screens:** Dashboard, Financial Reports, Analytics, Compliance, AI Command Center, Plans & Access.

Parent

Description: Receives daily updates, invoices, and announcements via the companion parent app or SMS. Does not access the CEven admin app. **Goals:** Know their child is safe every day without calling · Receive invoices and pay

digitally · Be notified immediately if anything happens. **Pain points:** No daily updates unless they call · Invoices arrive as a WhatsApp screenshot · No confirmation their child has been picked up safely. **Primary screens:** N/A — interacts exclusively via the parent app and SMS notifications triggered from CEven.

3. Information Architecture & Navigation

CEven uses a persistent left sidebar organised into 7 groups, plus a notifications inbox. An AI panel is available on every screen.

3.1 Sidebar Navigation

OVERVIEW

- **Dashboard** — KPI overview, AI daily brief, quick actions, live activity feed.

CHILDREN & PEOPLE

- **Children** — Enrolled register, search, filter, health flags.
- **Parents** — Parent directory, app adoption tracking, payment risk.
- **Enrolment & Waitlist** — Pipeline kanban, waitlist, trial sessions, leavers.
- **Child Development** — Milestones, observations, growth records, SEND register.
- **Staff** — Directory, QR attendance, log compliance tracking.
- **Payroll** — Monthly payroll run, salary setup, payslip history.
- **Leave Management** — Leave requests, approval flow, balances, calendar.
- **Compliance & Safety** — DBS register, fire drills, food hygiene, risk assessments, safeguarding.
- **Rooms & Classes** — Room cards with live occupancy and capacity.

DAILY OPERATIONS

- **Reception / QR** — Live check-in/out grid, QR scanner station, exception log.
- **Daily Logs** — Log compliance dashboard, submission status per child.
- **Health & Incidents** — Incident log, severity triage, parent notification tracking.
- **Medication** — Standing orders schedule, administration confirmation.
- **Inventory & Supplies** — Stock levels, low-stock alerts, equipment register, supply orders.
- **Facilities** — Maintenance requests, cleaning schedule tracker.
- **Tasks** — Task list, AI auto-assignment, priority and overdue tracking.

FINANCE

- **Billing & Payments** — Tuition invoicing, collection tracking, AI risk scoring.
- **Expenses** — Operating expense log, budget tracking, receipt management.
- **Financial Reports** — P&L, revenue by room, cost analysis, AI financial narrative.

COMMUNICATION

- **Messages** — Direct parent messaging, AI-assisted draft generation.
- **Announcements** — Broadcast to all parents or by specific room.
- **Events Calendar** — Events management, PT meetings, RSVP tracking.

INTELLIGENCE

- **AI Command Center** — Full AI insights dashboard, Ada chat, export.
- **Analytics** — Attendance trends, revenue charts, staff performance.
- **Reports** — Standard report generation, AI custom builder, scheduled auto-send.
- **Audit Trail** — Immutable full activity log, CSV export.

ACCOUNT & SETUP

- **Plans & Access** — Subscription comparison, plan activation.
- **Help & Training** — Guides, walkthroughs, AI-powered help.
- **Settings** — Crèche config, fee plans & budgets, notifications, user roles, AI persona.

3.2 Global Shell — Always Present

ELEMENT	SPEC
TRIAL BANNER	FULL-WIDTH COUNTDOWN WITH A "CHOOSE A PLAN" CTA. DISMISSIBLE. HIDDEN ONCE A SUBSCRIPTION IS ACTIVE.
Sidebar	Persistent navigation. Ada AI widget showing a live insight count. Active link highlighted. User profile pinned to the bottom.
Topbar	Screen title and plan badge on the left. Global search in the centre. AI panel toggle, notification bell, and a primary CTA on the right.
AI panel	Right-hand Ada panel — chat thread, suggested actions, input field. Available from every screen on desktop.
Toast	Bottom-right confirmation notification, auto-dismisses after 3 seconds.
Modals	All modals share one shell: title header, scrollable body, Cancel (secondary) and Submit (primary) footer buttons.

4. Subscription Tiers & Feature Gating

CEven's own software is sold to crèches on a 3-tier SaaS model with a 14-day free trial. This is distinct from what parents pay the crèche in tuition — see §5. Features above a crèche's current tier show a locked placeholder with an upgrade prompt; they never render broken or empty.

5. Billing & Monetization Model

CEven has **two structurally separate money flows**, and the product must never conflate them in UI, copy, or data model:

1. **Platform subscription (crèche → CEven)**. The crèche pays CEven for the right to use the software, at the tier described in §4. This is billed to the crèche's own payment method and managed entirely under **Plans & Access**.
2. **Tuition fees (parent → crèche)**. Parents pay the crèche for childcare. **Tuition is tied to the room/class the child is enrolled in** — each room has a fee plan (e.g. a fixed monthly amount), and a child's invoice is generated from the fee plan of the room they're enrolled in. This is **not** a generic "child subscription," and it is not CEven's revenue — CEven only facilitates the transaction. This flow is what **Billing & Payments, Expenses, and Financial Reports** are built around.

Payment processing rule: CEven never takes custody of parent funds. All tuition payments are processed through a third-party payment gateway (Paystack); CEven does not store card details and does not operate a wallet or balance system on behalf of crèches or parents. This is a hard product constraint, not an implementation detail — no future feature should require CEven to hold money on anyone's behalf.

Fee Plans (configured under Settings) define the price for each room/class and any add-on charges (see Open Product Decisions, §13, for the current state of add-on billing). The same Fee Plans configuration also defines the budget envelopes used by the Expenses screen — one configuration surface for all of a crèche's money-in/money-out planning.

Expense data sourcing: a crèche's own operating costs (staff payroll, rent, utilities, supplies, maintenance) are tracked under **Expenses**. Spend recorded against equipment, supplies, or orders in **Inventory & Supplies** rolls up automatically into the Expenses totals — it is never entered twice.

6. Screen-by-Screen Requirements

01 — Dashboard

Screen ID: `sc-dashboard` · **Plan:** All Plans

Purpose: First screen after login. At-a-glance view of the crèche's live operational and financial status.

User Stories:

- As a manager, I want to see how many children are present today so I can plan staffing.
- As a manager, I want to see outstanding fees on the dashboard so I can act without navigating away.
- As a manager, I want Ada to surface the 3 most important issues for today.
- As a manager, I want to see recent activity across the crèche in real time.

Acceptance Criteria:

- 8 KPI stat cards: Enrolled, Present Today, Absent, Staff on Duty, Outstanding Fees, Open Incidents, Reports Pending, Tasks Overdue.
- Stat cards auto-refresh every 30 seconds.
- AI daily brief card shows Ada's insights generated at 7am with at least 2 actionable insights and CTA buttons.
- Quick-action grid shows 5 buttons: Add Child, QR Station, New Log, New Invoice, View Reports.
- Outstanding invoices table shows the 5 most overdue, with an AI risk badge (High/Medium/Low).
- Activity feed shows the last 10 events across all modules, colour-coded by type, with timestamps.
- An onboarding progress card is shown until all 8 setup steps are complete, then disappears permanently.

Key Screen Elements: 8 KPI stat cards (label, value, sub-text, colour-coded accent) · AI daily brief card (Ada branding, live indicator, insight rows with category dot and action button) · Quick-actions grid (5 icon tiles) · Outstanding invoices table with AI Risk badge and Days Overdue in red when >7 · Live activity feed (coloured dot, description, timestamp) · Onboarding checklist card with progress percentage.

02 — Children

Screen ID: `sc-children` · **Plan:** All Plans

Purpose: Main enrolment register showing every enrolled child, filterable by room and attendance status.

User Stories:

- As a manager, I want to see all enrolled children in one table so I can find any child instantly.
- As a manager, I want to filter by room to see only one class at a time.
- As a caregiver, I want health flags visible in the list so I never overlook an allergy.
- As a manager, I want to see fee status per child to spot payment issues without opening invoices.

Acceptance Criteria:

- 4 stat cards: Total Enrolled, Active, New This Month, Graduating Soon.
- Table: child avatar and name, age, room, parent name, attendance status, health flag, fee status, actions.
- Search filters by child name or parent name in real time.

- Room and attendance-status (All/Present/Absent) filters available.
- A red allergy badge appears in the health flag column for any child with allergy records.
- Fee status shown as a badge: Paid (green), Pending (amber), Overdue (red).
- Clicking any row opens the child's full profile.
- "+ Enrol Child" CTA opens the enrolment modal.

Key Screen Elements: 4 stat cards · Real-time search bar · Room and status filter dropdowns · Table with avatar, name, age, room, parent name, status badges · Allergy badge · Fee status badge · Row click → child profile.

03 — Child Profile

Screen ID: `sc-child-profile` · **Plan:** All Plans

Purpose: Everything about a single child — hero card, 6 content tabs, and an AI welfare panel.

User Stories:

- As a caregiver, I want to see a child's health notes, allergies, and medication in one place.
- As a manager, I want to review a child's log history to identify welfare patterns.
- As an admin, I want to see all invoices for a child from their profile.
- As a manager, I want to see Ada's welfare assessment based on recent log data.

Acceptance Criteria:

- Profile hero card: child avatar, full name, age, room, child reference ID (format `CEV-YYYY-NNNN`, auto-generated on enrolment), QR code thumbnail.
- Tab navigation: Overview | Daily Logs | Health | Billing | Development | Contacts.
- Overview: 7-day mood trend, today's log card, monthly attendance summary.
- Health: allergy details (allergen, reaction, EpiPen status), medical notes, vaccination status, GP contact.
- Billing: the room/fee plan this child's tuition is generated from, all invoices with status, and payment history.
- Development: milestone summary, recent observations, growth records.
- Contacts: authorised pickup persons with relationship and ID type.
- AI welfare panel: welfare score, mood health score, eating pattern, written assessment, recommended action.

Key Screen Elements: Profile hero card (avatar, monospace reference ID, QR thumbnail) · 6-tab bar · 7-day mood trend row · AI welfare section (confidence %, recommended action button) · Allergy cards with severity badge and EpiPen indicator · Contacts with relationship, phone, authorisation status.

04 — Parents & Guardians

Screen ID: `sc-parents` · **Plan:** All Plans

Purpose: Parent directory with linked children, app adoption status, payment risk scores, and outreach tracking.

User Stories:

- As a manager, I want to see which parents haven't downloaded the app.

- As a manager, I want to see which parents are high payment risk.
- As an admin, I want to send an app invite with one click.

Acceptance Criteria:

- 4 stat cards: Registered Parents, App Active count, High Payment Risk, Uncontacted Today.
- Table: parent avatar + name, phone, children linked, balance status, app status, AI Risk badge, Send App Invite action.
- App status: Active (green), Inactive (amber), Not Installed (red).
- AI Risk: High (red), Medium (amber), Low (green).
- "Send App Invite" is limited to once per 24 hours per parent; the action greys out after a send.
- Search filters in real time.
- "+ Add Parent" CTA available.
- Clicking a parent opens their full profile: contact details, linked child(ren) and which room/fee plan each is enrolled under, activity history, and payment history.

Key Screen Elements: 4 stat cards · Parent table with app status and AI risk badges · Real-time search · "+ Add Parent" CTA · Parent profile (activity log + payment history tabs).

05 — Enrolment & Waitlist

Screen ID: `sc-enrolment` · **Plan:** All Plans

Purpose: Manages the full family journey — enquiry through enrolment and departure.

User Stories:

- As a manager, I want to see all enquiries in a pipeline view so I know who to follow up with.
- As an admin, I want to add a family to the waitlist and know exactly how long they've been waiting.
- As a manager, I want to schedule and record trial sessions.
- As a manager, I want to process a child's departure and archive their record.

Acceptance Criteria:

- 4 stat cards: Active Enquiries, Waitlisted, Enrolled This Term, Leavers.
- AI conversion prediction banner.
- Pipeline tab: 5-column Kanban — Enquiry Received | Visit Scheduled | Trial Booked | Offer Made | Enrolled, with column count badges.
- Waitlist tab: position, child, room, date added, weeks waiting (red if >8 weeks), sibling-enrolled badge, "Make Offer" action.
- Trials tab: session table with outcome badge.
- Leavers tab: reason, last day, notice adequacy, exit survey, data archive status.
- "+ New Enquiry" CTA opens the enquiry form.

Key Screen Elements: 4 stat cards · AI conversion banner · 5-column Kanban with count badges · Waitlist table (colour-coded weeks waiting, sibling badge) · "Make Offer" action · Trials table with outcome badge · Leavers table with notice-adequacy badge.

06 — Child Development

Screen ID: `sc-development` · **Plan:** Flourish

Purpose: Tracks developmental progress across 4 domains, stores caregiver observations, records growth, and maintains the confidential SEND register.

User Stories:

- As a caregiver, I want to record a developmental observation quickly.
- As a manager, I want to see which children need monitoring or SEND review.
- As a DSL (Designated Safeguarding Lead), I want to add a child to the SEND register and track their support plan.

Acceptance Criteria:

- 4 stat cards: On Track, Monitoring, SEND Review (red), Observations This Week.
- AI summary generation banner — generates a termly developmental summary.
- Milestones tab: Child, Age, Room, Motor/Language/Social/Cognitive domain badges, Last Assessed, AI Flag.
- Observations tab: caregiver observation cards with date and category.
- Growth tab: height/weight records, BMI indicator, previous-vs-current comparison.
- SEND tab: visible to Manager/Owner only; confidentiality banner always shown; add-only (no edit or delete).

Key Screen Elements: 4 stat cards (SEND Review in red) · AI summary generation button · Milestones table with per-domain badges · Observation cards · Growth table with change indicator · SEND tab (confidentiality banner, restricted, add-only).

07 — Staff

Screen ID: `sc-staff` · **Plan:** All Plans

Purpose: Full staff roster with live on-duty status, weekly attendance, and per-caregiver log compliance.

User Stories:

- As a manager, I want to see all staff with on-duty status so I know coverage at any moment.
- As a manager, I want to see weekly attendance for each staff member.
- As a manager, I want to see each caregiver's log compliance to hold them accountable.
- As an owner, I want to change a staff member's role without technical help.

Acceptance Criteria:

- 4 stat cards: Total Staff, On Duty, Absent, Average Log Compliance.
- Directory tab: grid of staff cards — avatar, name, role badge, room, check-in time, compliance bar.
- Compliance tab: table of logs submitted vs. expected, flagged if below 80%.
- Attendance tab: Mon–Fri grid, tick/cross per day per staff member.
- "+ Add Staff" CTA opens an invite modal.
- Compliance bars render red when below 80%.

Key Screen Elements: 4 stat cards · Staff card grid (role badge, room, check-in time, compliance bar) · Colour-coded compliance bars · Flag badge on cards below threshold · 5-column weekly attendance grid.

08 — Payroll Management

Screen ID: `sc-payroll` · **Plan:** All Plans

Purpose: Full monthly payroll cycle — gross salary through PAYE tax, 8% pension, absence deductions, and bonuses to net pay. Payroll records are immutable once run.

User Stories:

- As a manager, I want to review all staff pay before approving the payroll run.
- As an owner, I want AI to flag anomalies before I commit.
- As a staff member, I want to receive my payslip automatically on payroll run.

Acceptance Criteria:

- 4 stat cards: Total Gross, Total Deductions, Net Payroll, Payroll Status.
- AI anomaly banner appears when any row is flagged for review.
- Current Month tab: Staff, Role, Basic, Bonus, Deductions, PAYE, Pension (8%), Absent Days, Net Pay, Status. Flagged rows **must** be resolved before the run can proceed.
- "Approve & Run" is blocked until all review flags are cleared, and requires a confirmation step.
- History tab: past payroll runs with gross/net totals and per-month payslip download.
- Salary Setup tab: staff list with salary, employment type, and bank details masked to the last 4 digits only.
- Payslips are auto-sent to all staff on run.

Key Screen Elements: 4 stat cards · AI anomaly banner · Payroll table (bonus in green, deductions in red, net pay bold) · "Review Required" badge on flagged rows · Blocked "Approve & Run" state · History tab with payslip download · Salary setup with permanently masked bank details.

09 — Leave Management

Screen ID: `sc-leave` · **Plan:** All Plans

Purpose: Full staff leave cycle — requests, approval/decline, cover tracking, and balance visibility.

User Stories:

- As a staff member, I want to request leave without a paper form.
- As a manager, I want to be warned when approving leave would leave a room understaffed.
- As a manager, I want to see all staff leave balances.

Acceptance Criteria:

- 4 stat cards: Pending, Currently On Leave, Approved This Month, Average Days Available.
- AI staffing-gap warning when approving leave would leave a room without qualified cover.
- Requests tab: Staff, Leave Type, From, To, Days, Reason, Cover Arranged, Status, with inline Approve/Decline.

- Approval is blocked when Cover Arranged = false for caregiving roles.
- Balances tab: entitlement, taken, remaining, per staff member.
- Calendar tab: monthly view of all leave periods.
- Leave types: Annual, Sick, Maternity, Paternity, Unpaid, Compassionate.

Key Screen Elements: 4 stat cards · AI staffing warning banner · Leave requests table with inline approve/decline · Leave type badges · Cover Arranged indicator (green/red) · Leave balances table · Monthly calendar tab.

10 — Compliance & Safety

Screen ID: `sc-compliance` · **Plan:** All Plans

Purpose: Regulatory compliance hub — DBS expiry, fire drills, food hygiene, risk assessments, and the DSL-restricted safeguarding log.

User Stories:

- As a manager, I want to see which compliance items are overdue before an inspection.
- As a DSL, I want to log child-protection concerns in a confidential, immutable record.
- As a manager, I want to be alerted 60 days before a DBS certificate expires.

Acceptance Criteria:

- 4 stat cards: Compliant, Overdue (red), Due This Month, Next Inspection.
- Overdue alert banner listing the specific items at risk.
- 5 tabs: DBS | Fire Drills | Food Hygiene | Risk Assessments | Safeguarding.
- DBS tab: staff, check type, issue date, expiry, masked certificate number, status badge; expired rows show a red badge plus "Renew Now."
- Fire Drills tab: duration, outcome, issues logged; warning shown when the next drill is overdue.
- Food Hygiene tab: temperature log, auto-flagged when readings fall outside safe ranges.
- Risk Assessments tab: area, risk level, controls, last reviewed, next review.
- Safeguarding tab: DSL/Owner access only; add-only (no edit or delete); confidentiality banner always shown.
- "Export Compliance Pack" generates a single PDF for inspections.

Key Screen Elements: 4 stat cards (overdue in red) · Overdue items banner · 5-tab structure · DBS table with "Renew Now" on expired rows · Fire drill overdue warning · Auto-flagged food hygiene rows · Safeguarding confidentiality banner · "Export Compliance Pack" CTA.

11 — Rooms & Classes

Screen ID: `sc-rooms` · **Plan:** All Plans

Purpose: All active rooms with live occupancy, capacity, and the fee plan tied to each room.

User Stories:

- As a manager, I want to see at a glance which rooms are at capacity.
- As a manager, I want to create a new room when we expand.

Acceptance Criteria:

- Room cards: emoji/icon, name, age range, capacity, enrolled count, present today, lead caregiver, occupancy %, status badge.
- Status: Available (green), Near Capacity (amber, >85%), Full (red).
- Waitlist count shown on full rooms.
- Each room card shows the fee plan currently assigned to that room (amount and billing frequency).
- "+ Add Room" CTA opens a creation modal, including setting that room's fee plan.
- Clicking a room opens a detail view with its assigned children and staff.

Key Screen Elements: Room card grid with live occupancy data · Status badge per room · Waitlist count on full rooms · Fee plan display per room · "+ Add Room" CTA.

12 — Reception / QR Station

Screen ID: `sc-reception` · **Plan:** All Plans

Purpose: QR attendance station. Displays the crèche's QR code for parents to scan, and a live grid of every child and staff member's current check-in state.

User Stories:

- As a receptionist, I want to see who is currently checked in without searching.
- As a receptionist, I want to manually check in a child when their QR is unavailable.
- As a manager, I want to be alerted immediately for an unauthorised pickup attempt.

Acceptance Criteria:

- QR station card: crèche QR code, date, crèche name, download button. The QR token rotates daily.
- Live check-in grid: every child/staff member with state — In (green), Out (dimmed), Late (amber).
- Summary row: Checked In, Checked Out, Absent, Late counts.
- Exception log panel: most recent exceptions — type, person, time, Resolve action.
- "+ Manual Check-In" requires selecting a reason from a predefined list (no free text).
- Filter: Children / Staff / All.
- Grid updates in real time.

Key Screen Elements: QR station card with animated scanner line · Check-in grid with colour state per card · Summary stat row · Exception log panel · Children/Staff/All filter.

13 — Daily Logs

Screen ID: `sc-daily-logs` · **Plan:** All Plans

Purpose: Compliance dashboard tracking whether every present child has had a daily log submitted.

User Stories:

- As a caregiver, I want to submit a daily log in under 2 minutes without leaving the room.

- As a manager, I want to see at a glance which logs are still pending.
- As a manager, I want AI to flag unusual mood patterns in today's logs.

Acceptance Criteria:

- 4 stat cards: Submitted, Pending, Compliance %, Average Submit Time.
- AI compliance banner appears when below 80%, naming the pending caregivers.
- Table: Child, Room, Caregiver, Submitted time, Mood emoji, Meals summary, Status badge.
- Status badges: Submitted (green), Pending (amber), AI Flag (navy).
- "Bulk Remind" sends a push notification to caregivers with pending logs.
- Room filter for single-room view.
- Clicking a submitted log opens its detail; clicking a pending row opens a submission modal for that child.

Key Screen Elements: 4 stat cards (compliance card colour changes dynamically) · AI flag badge on welfare-flagged rows · Room filter pills · Monospace submitted time · "Bulk Remind" (disabled when nothing is pending).

14 — Health & Incidents

Screen ID: `sc-health` · **Plan:** All Plans

Purpose: Logs all child incidents with severity triage and tracks the 4-hour parent-notification window.

User Stories:

- As a caregiver, I want to raise an incident quickly even when stressed.
- As a manager, I want to see all open incidents with parent notification status.
- As an owner, I want immediate notification for any High severity incident.

Acceptance Criteria:

- 4 stat cards: Open, This Month, Resolved, Parent Notified.
- AI alert banner appears when any open incident has had no parent notification after 4 hours.
- Table: Child, Type, Severity badge, Time, Raised By, Parent Notified (with countdown), Status.
- High-severity rows are visually differentiated with a red left border.
- "+ Raise Incident" CTA opens the incident modal.
- Clicking a row opens the full incident detail with its action timeline.

Key Screen Elements: 4 stat cards · Alert banner as the notification deadline approaches · Severity badges (High red, Medium amber, Low green) · Red left-border on high-severity rows · Parent-notification countdown.

15 — Medication Logs

Screen ID: `sc-medication` · **Plan:** All Plans

Purpose: Standing medication orders and the daily administration schedule, with auditable confirmation.

User Stories:

- As a caregiver, I want to see all medication due today so I don't miss a dose.
- As a manager, I want a record of every administration, with caregiver name and time.

Acceptance Criteria:

- Schedule table: Child, Medication, Dose, Frequency, Caregiver, Scheduled Time, Status badge.
- Status: Done (green), Due Soon (amber, with countdown), Overdue (red).
- AI alert appears when medication is overdue.
- "Confirm Administration" action records the confirming caregiver and timestamp.
- Standing Orders tab: add, edit, delete.
- Room filter available.

Key Screen Elements: Schedule table with status badges and Confirm action · Overdue medication alert · Room filter · Standing orders management tab.

16 — Inventory & Supplies

Screen ID: `sc-inventory` · **Plan:** All Plans

Purpose: Tracks consumable stock and fixed equipment; AI suggests optimised reorder lists.

User Stories:

- As a manager, I want to know which supplies are running low before they run out.
- As an admin, I want AI to suggest what to order and from which supplier.
- As a manager, I want to track equipment condition and flag items needing repair.

Acceptance Criteria:

- 4 stat cards: Low Stock Alerts (red), Total Items, Monthly Spend, Pending Orders.
- AI reorder suggestion banner.
- Stock tab: Item, Category, Current Stock, Min Level, Unit, Last Restocked, Estimated Days Left, Status — Days Left shown in red if <3, amber if <7.
- "Order Now" button on low-stock rows.
- Equipment tab: item, room, qty, condition badge (Good/Fair/Poor), last serviced, next service due.
- Orders tab: order history with supplier, cost, and status.
- "AI Reorder" generates an AI-optimised reorder list.
- All spend recorded here rolls up automatically into the Expenses screen total — it is never entered twice.

Key Screen Elements: 4 stat cards (low stock in red) · AI reorder banner · Colour-coded Days Left · "Order Now" on low-stock rows · Equipment condition badges · "AI Reorder" button.

17 — Facilities

Screen ID: `sc-facilities` · **Plan:** All Plans

Purpose: Maintenance request logging and tracking, plus the daily cleaning schedule checklist.

User Stories:

- As a caregiver, I want to report a maintenance issue quickly so it doesn't get forgotten.
- As a manager, I want to see all open requests and who is assigned.
- As a manager, I want to track which cleaning tasks have been completed today.

Acceptance Criteria:

- 4 stat cards: Open Requests, Resolved This Month, Cleaning Tasks Done Today, Next Service.
- Alert banner for high-priority issues open longer than 48 hours.
- Maintenance tab: Date, Location, Issue, Priority badge, Reported By, Assigned, Status, Resolution Date.
- "+ Maintenance Request" CTA.
- Cleaning tab: tap-to-complete daily checklist showing location and scheduled time, with a green tick and completion time once done.

Key Screen Elements: 4 stat cards · High-priority maintenance alert · Maintenance table with Priority badges · "Resolve" action per open request · Tap-to-complete cleaning checklist.

18 — Tasks & Workflow

Screen ID: `sc-tasks` · **Plan:** All Plans

Purpose: Manages operational tasks — manual to-dos and AI-auto-assigned tasks triggered by incidents, overdue invoices, and welfare flags.

User Stories:

- As a manager, I want to create a task and assign it to a staff member with a due date.
- As a manager, I want AI to automatically create a task when an incident is raised.
- As a manager, I want to see all overdue tasks surfaced prominently.

Acceptance Criteria:

- Summary row: total tasks, overdue count, in-progress, AI-escalated.
- AI alert banner appears when overdue tasks exist.
- Table: Title, Assigned To, Due Date, Priority badge, Source badge (Manual/AI Assigned/AI Escalated), Status.
- AI auto-creates tasks when: an incident is raised, an invoice is >7 days overdue, a welfare flag is triggered, or a missing checkout is detected.
- Tasks overdue by more than 24 hours are automatically escalated.
- "+ Add Task" CTA opens a creation modal with staff assignment and due date.

Key Screen Elements: Task summary row · AI overdue banner · Tasks table with Priority and Source badges · Status filter · Task creation modal.

19 — Billing & Payments

Screen ID: `sc-billing` · **Plan:** All Plans

Purpose: Manages tuition invoicing (see §5 for the underlying billing model), tracks collection against the monthly target, and surfaces AI payment-risk scoring so the manager knows which families to follow up with first.

User Stories:

- As a manager, I want to see total collected vs. outstanding this month at a glance.
- As an admin, I want to create a new invoice in under 30 seconds.
- As a manager, I want AI to flag families most likely to default so I can prioritise follow-up calls.
- As a manager, I want to send bulk SMS reminders to all overdue families in one action.

Acceptance Criteria:

- 4 stat cards: Collected (current month), Outstanding, Overdue >7 days, Monthly Target.
- **Monthly Target is system-calculated** from active room fee plans and current enrolment — it is never a number staff type in manually.
- A collection-progress trend is shown as a single line tracking amount collected over the month against the target (not a multi-series comparison) — this should read clearly at a glance, not require interpretation.
- AI billing insight banner appears when collection is below target, naming the specific high-risk families.
- Invoices table: Child, Parent, Room/Fee Plan, Amount, Due Date, Days Overdue (red if >7), AI Risk badge, Status.
- "+ New Invoice" CTA opens the invoice modal. This is primarily for staff to generate an invoice or record a payment on behalf of a parent who isn't using the parent app — the expected default is that most invoicing happens automatically from each child's room fee plan.
- "Bulk Remind" sends SMS to all overdue/pending families, limited to once per 24 hours; the button greys out after a send.
- Filter by status: All / Pending / Overdue / Paid.

Key Screen Elements: 4 stat cards · Single-line collection trend with target marker · AI insight banner naming high-risk families · Invoice table with AI Risk and Days Overdue columns · "Bulk Remind" (greyed after daily send) · Status filter tabs.

20 — Expenses

Screen ID: `sc-expenses` · **Plan:** All Plans

Purpose: Tracks the crèche's own operating expenses against monthly category budgets. This is the crèche's outgoing spend — separate from the tuition parents pay in (§19).

User Stories:

- As an admin, I want to log an expense with a receipt so it is properly recorded.
- As a manager, I want to see how much budget remains in each category.
- As an owner, I want to approve or reject pending expenses.

Acceptance Criteria:

- 4 stat cards: Monthly Budget, Spent, Remaining, Pending Approval count.
- Budget breakdown by category, shown as spent-vs-budget.
- Expense log: Date, Category, Description, Amount, Paid By, Receipt status, Approval status.

- Categories include at minimum: Payroll, Rent, Utilities, Supplies, and an Other bucket.
- "+ Add Expense" CTA.
- Expenses over ₦50,000 require a receipt — an "Upload Receipt" prompt appears on rows missing one, and the expense cannot be approved without it.
- Pending expenses show inline Approve/Reject actions (manager/owner only).
- Approved expenses are immutable — no edit or delete once approved.
- Monthly budgets per category are configured under Settings (Fee Plans & Budgets), and equipment/supply spend recorded under Inventory & Supplies rolls into this screen's totals automatically.

Key Screen Elements: 4 stat cards · Category budget breakdown · Expense table with category badge and approval status · "Upload Receipt" prompt above the threshold · Inline approve/reject for pending rows.

21 — Financial Reports

Screen ID: `sc-financial-reports` · **Plan:** Nestling Pro & Flourish

Purpose: Monthly P&L, revenue by room, and cost analysis, with an AI-generated plain-English financial narrative.

User Stories:

- As an owner, I want a simple P&L for any month without needing an accountant.
- As a manager, I want to see which rooms generate the most and least revenue.
- As an owner, I want Ada to tell me in plain English what to do to close the month profitably.

Acceptance Criteria:

- Month selector, defaulting to the current month.
- P&L tab: Income section (tuition, registration, meals add-on, total) + Expenditure section (payroll, rent, supplies, utilities, maintenance, other, total). Net Result box — green for surplus, red for deficit.
- AI narrative card below the P&L — a plain-English summary naming specific families/actions; it must never state a name or figure not present in the underlying data.
- Revenue tab: by room — potential revenue, collected, outstanding, collection %, colour-coded by percentage.
- Cost Analysis tab: each expense category as a % of total income; payroll ratio highlighted against a 60–70% healthy-range indicator.
- "Export P&L" generates a branded PDF.

Key Screen Elements: Month selector · Two-section P&L layout with bold totals · Colour-coded Net Result box · AI narrative card · Revenue-by-room breakdown table · Cost analysis chart · "Export P&L" button.

22 — Messages

Screen ID: `sc-comms` · **Plan:** All Plans

Purpose: Direct one-to-one messaging between staff and parents, with AI-assisted draft generation.

User Stories:

- As a manager, I want to send a direct message to a parent without leaving the platform.

- As a caregiver, I want AI to draft a welfare message so I don't have to choose the right words.
- As a manager, I want to see all unread message threads in one place.

Acceptance Criteria:

- Message thread list: sender, preview, timestamp, unread badge.
- Unread threads are visually distinguished (amber left border).
- "+ New Message" opens a compose modal with parent search.
- An "AI Assist" toggle generates a contextually appropriate draft.
- Messages deliver via in-app push, with SMS fallback.
- Unread count shown as a badge in the sidebar.

Key Screen Elements: Thread list with unread indicator · Amber left border on unread threads · Compose modal with parent search and AI Assist toggle · Delivery status indicator (app push / SMS fallback).

23 — Announcements

Screen ID: `sc-announcements` · **Plan:** All Plans

Purpose: Broadcast messages to all parents or to a specific room, via SMS and/or in-app push.

User Stories:

- As a manager, I want to message all parents at once without copy-pasting into WhatsApp.
- As a manager, I want to target an announcement to one room.
- As a manager, I want to see how many parents received and read each announcement.

Acceptance Criteria:

- "+ Announcement" opens a compose modal.
- Audience selector: All Parents or by Room.
- Announcement type dropdown (e.g. holiday closure, general notice).
- SMS and app-push delivery toggles — both can be active simultaneously.
- Sent history shows: subject, audience, date, app delivery count, SMS count.

Key Screen Elements: Sent-announcements list with delivery stat badges · Compose modal with audience and delivery toggles · Per-announcement delivery stats.

24 — Events Calendar

Screen ID: `sc-events` · **Plan:** All Plans

Purpose: Manages crèche events — parent-teacher meetings, sports days, CPD training days, open days — with invitations and RSVP tracking.

User Stories:

- As a manager, I want to schedule a parent-teacher meeting and invite all relevant parents.
- As a manager, I want to see RSVP responses to know expected attendance.

- As a manager, I want to mark a CPD day so staff and parents know the crèche is closed.

Acceptance Criteria:

- Upcoming events shown as cards — title, date, time, audience badge, description.
- Each event card has "Send Invitation" and "View RSVPs" actions.
- "+ New Event" CTA opens the event creation modal.
- Audience types: All Parents, All Families, Specific Room, Staff Only.
- RSVP list shows each parent's response (Attending / Not Attending / Maybe) with a count summary.

Key Screen Elements: Event cards with audience badge and action buttons · Event creation modal · RSVP list with response badges and count summary.

25 — AI Command Center

Screen ID: `sc-ai-center` · **Plan:** Nestling Pro & Flourish

Purpose: Ada's dedicated screen — a full-width intelligence hub spanning health, finance, and staff insights, plus chat and report export.

User Stories:

- As a manager, I want to see all AI insights in one place by type and urgency.
- As a manager, I want to ask Ada a question about my crèche data in plain English.
- As an owner, I want to export all AI intelligence as a report PDF.

Acceptance Criteria:

- AI insight list: category dot, priority number, headline, confidence %, data sources, CTA button.
- Category filter: All | Health | Finance | Staff.
- Insights sorted by priority (1 = most urgent); CTAs navigate to the relevant screen or trigger a modal action.
- "Refresh AI" triggers on-demand re-analysis (Flourish only).
- "Export AI Report" generates a PDF (Flourish only).
- AI chat panel is open by default on this screen.
- Seedling-tier crèches see a locked-gate overlay rather than this screen.

Key Screen Elements: AI insight list with priority, headline, confidence %, and CTA per item · Category filter tabs · "Refresh" and "Export" buttons · AI chat panel open by default · Locked-gate overlay for Seedling.

26 — Analytics

Screen ID: `sc-analytics` · **Plan:** Nestling Pro & Flourish

Purpose: Aggregated analytics — attendance patterns, monthly revenue vs. target, staff compliance trends, and AI pattern insights.

User Stories:

- As an owner, I want to see attendance trends over 6 months.

- As a manager, I want to see revenue vs. target charted weekly.
- As an owner, I want to see which rooms have the best and worst staff compliance.

Acceptance Criteria:

- 4 stat cards: Enrolment, Average Attendance %, Revenue (current month), Open Incidents.
- 4 tabs: Overview | Attendance | Revenue | Staff.
- Overview: summary charts plus AI top-3 performance observations.
- Attendance: weekly bar chart, room breakdown, trend vs. last month.
- Revenue: collected-vs-outstanding stacked bars, monthly-vs-target line.
- Staff: per-caregiver compliance bars, attendance rate summary.

Key Screen Elements: 4 stat cards · 4 content tabs · Bar charts for attendance and revenue · Room-by-room breakdown table · AI observations panel per tab · Period selector.

27 — Reports

Screen ID: `sc-reports` · **Plan:** Nestling Pro & Flourish

Purpose: Reporting centre — 7 standard one-click reports, an AI custom builder, and scheduled automated delivery.

User Stories:

- As an owner, I want a monthly P&L emailed automatically on the 1st of every month.
- As a manager, I want to ask Ada to build a custom report in plain English.
- As a manager, I want a regulatory compliance pack with one click before an inspection.

Acceptance Criteria:

- 4 stat cards: Reports Generated, Scheduled Active, Last Export, Data Coverage.
- 2-column layout: Standard Reports (left), Scheduled Reports (right).
- 7 standard report cards: Occupancy Trend, Attendance Pattern, Revenue per Room, Incident Trend, Staff Performance, Regulatory Compliance Pack, Child Development Summary.
- An 8th card: AI Custom Report Builder — a plain-English query produces a PDF.
- Scheduled reports list: name, schedule, recipients, next run date, active toggle.
- "+ Schedule" CTA, with schedule options: Weekly (Monday), Monthly (1st), Monthly (28th), Quarterly, End of Term.

Key Screen Elements: 7 standard report cards with "Generate" button · AI Custom Report Builder card · Scheduled reports panel with next-run date · "+ Schedule" CTA · Loading state while a report builds.

28 — Audit Trail

Screen ID: `sc-audit` · **Plan:** All Plans

Purpose: A complete, immutable log of every action taken in the system.

User Stories:

- As an owner, I want a record of every action in the system for full accountability.
- As a manager, I want to filter the audit log to investigate a specific incident.
- As an owner, I want to export the audit log as CSV for an external audit.

Acceptance Criteria:

- Table: Time, User, Role, Action description, Record affected, Method (QR/App/Web/Manual).
- Filters: date range, user, event type.
- "Export Log" generates a CSV.
- Records are never deleted and cannot be edited, by anyone, under any role.
- Audit entries are created automatically for every user action across every module.

Key Screen Elements: Full-width audit table · Date range/user/event-type filters · "Export Log" CSV button · Method badge per row.

29 — Plans & Access

Screen ID: `sc-subscription` · **Plan:** All Plans

Purpose: Manages the crèche's own subscription to CEven (S4) — plan comparison, payment activation, and the Parent App add-on.

User Stories:

- As an owner, I want to compare plan features clearly to choose the right tier.
- As an owner, I want to upgrade and have AI features unlock immediately.
- As a manager, I want to see exactly how many trial days remain.

Acceptance Criteria:

- Trial countdown prominently shown, with urgency styling at ≤5 days remaining.
- 3 plan cards: Seedling | Nestling Pro (featured) | Flourish. The current plan has a visually distinct border/state.
- "Choose [Plan]" triggers payment.
- A successful payment activates the new plan immediately — features unlock without a page refresh, and the trial banner disappears.
- Parent Add-On card: ₦2,500/child/month, with a toggle and a live-calculated monthly cost.

Key Screen Elements: 3 plan cards (Nestling Pro featured) · Trial countdown with urgency styling · Feature list (✓ green / ✗ muted) · Payment integration · Parent Add-On toggle card.

30 — Settings

Screen ID: `sc-settings` · **Plan:** All Plans

Purpose: The crèche's configuration centre.

User Stories:

- As a manager, I want to set operating hours so the system knows when check-ins are late.

- As an owner, I want to create and edit fee plans and budgets.
- As a manager, I want to rename and retone Ada to match our crèche's culture.
- As an admin, I want to assign roles to staff members.

Acceptance Criteria:

- 5 tabs: Crèche | Fee Plans & Budgets | Notifications | Roles | AI Persona.
- Crèche tab: name, address, phone, capacity, operating hours (per day), late threshold, compliance target %.
- Fee Plans & Budgets tab: a table to add/edit/delete room fee plans (price, billing frequency, room assignment) and monthly expense category budgets, in one place.
- Notifications tab: 4 on/off toggles — QR alerts, daily log, incident, payment reminders. Incident notifications cannot be fully disabled, ever.
- Roles tab: staff list with role assignment. The Owner role cannot self-demote.
- AI Persona tab: name (max 20 characters), tagline, tone (4 options), emoji picker, gradient picker, daily brief time, alert frequency. Changes preview live.
- "Save Changes" stages all edits until explicitly saved.

Key Screen Elements: 5-tab structure · Crèche settings form with per-day operating hours · Combined fee-plan/budget table with inline add/edit/delete · Notification toggle pills · Roles table with role dropdowns · AI Persona editor with live preview.

31 — Notifications

Screen ID: `sc-notifications` · **Plan:** All Plans

Purpose: In-app inbox for every system notification.

User Stories:

- As a manager, I want all notifications in one place so I don't miss alerts.
- As a manager, I want to mark all notifications as read in one action.

Acceptance Criteria:

- Notification list: type icon, title, body, timestamp, unread indicator.
- Types are colour-coded: AI Alert (navy), Incident (red), Payment (amber), Check-In (green), Task (amber), Announcement (navy).
- "Mark All Read" CTA.
- Unread notifications are visually distinct from read ones.
- Clicking a notification navigates to the relevant screen or opens the relevant modal.
- An unread-count badge appears in the sidebar and on the topbar bell.

Key Screen Elements: Notification list with type-coloured icon badges · Unread/read visual distinction · "Mark All Read" button · Click-through navigation per type.

32 — Help & Training

Screen ID: `sc-help` · **Plan:** All Plans

Purpose: In-app help centre — setup guides, walkthroughs, and AI-powered Q&A.

User Stories:

- As a new caregiver, I want to learn how to submit a daily log without calling the manager.
- As a manager, I want to search for a feature and get a quick answer.
- As an owner, I want to know how to upgrade my plan from within the app.

Acceptance Criteria:

- 8-step onboarding checklist with per-step tick-off.
- Search bar filters help articles.
- Article categories: Getting Started, Children & Logs, Billing, Staff & HR, Compliance, AI Features, Account & Plans.
- "Ask AI" lets any staff member ask Ada free-text questions about the platform.
- Video walkthrough thumbnails for core workflows.

Key Screen Elements: Onboarding checklist card · Help search bar · Article category grid · "Ask AI" CTA · Video walkthrough cards.

7. AI System — Ada

Ada is not a chatbot. She is an embedded intelligence layer woven throughout the product. Every output must be grounded in real crèche data — Ada never fabricates a name, figure, or fact. Her name, tone, emoji, and schedule are fully customisable from Settings. (The underlying AI provider/model is a technical decision made independently of this spec — see §13.)

7.1 Where Ada Appears

SURFACE	BEHAVIOUR
SIDEBAR AI WIDGET	ALWAYS-ON, SHOWS A LIVE INSIGHT COUNT AND TODAY’S HEADLINE. OPENS THE AI PANEL ON CLICK.
Topbar toggle	Opens/closes the AI panel from any screen.
AI panel	Ada avatar, chat thread, suggested action chips, input field. Available from every screen.
Dashboard brief card	Full-width card with Ada's top 3 insights, generated at 7am daily.
Screen banners	Contextual alerts on Billing, Daily Logs, Health, Payroll, Leave, Compliance, Inventory, and Enrolment.
AI Command Center	Dedicated screen: all insights by category, chat, export.
Financial Reports	Plain-English narrative block below the P&L, with named recommendations.
Settings → AI Persona	Where the manager customises name, tone, emoji, gradient, brief time, and alert frequency.

7.2 AI Insight Triggers

CATEGORY	TRIGGER	EXAMPLE OUTPUT
HEALTH	CHILD HAS LOGGED LOW MOOD 4+ OF THE LAST 5 DAYS	"[CHILD NAME] HAS LOGGED LOW MOOD 4 DAYS RUNNING. WELFARE CHECK RECOMMENDED." → <i>INITIATE WELFARE CHECK</i>
Finance	Invoice overdue >7 days	"[Parent name]'s ₦45K invoice is 10 days overdue. High non-payment risk (87%). Call by Thursday." → <i>Send Reminder</i>
Finance	Monthly collection tracking below 70%	"April at 67%. To hit 85%, 6 families need follow-up." → <i>View Overdue</i>
Staff	Caregiver log compliance <70% for 3+ days	"[Caregiver role] compliance dropped to 62% this week." → <i>View Staff</i>
Staff	3+ absent days without approved leave	"3 unrecorded absences this month. Payroll will auto-deduct. Confirm before running." → <i>Review Payroll</i>

CATEGORY	TRIGGER	EXAMPLE OUTPUT
Operations	Children still checked in at close of day	"2 children still checked in at 6:45pm. Flagged as missing checkout." → <i>View Reception</i>
Compliance	DBS expiring within 30 days	"A DBS certificate expires in 28 days. Initiate renewal." → <i>View DBS Register</i>
Enrolment	Waitlist families showing high engagement	"AI predicts 2 of 3 waitlisted families will convert this term." → <i>View Waitlist</i>

7.3 AI Persona Customisation

SETTING	SPEC
NAME	DEFAULT "ADA" — MAX 20 CHARACTERS
Tagline	Short phrase shown in the sidebar widget
Tone	4 options: Professional Warm Casual Friendly Formal Precise Encouraging Upbeat
Emoji	Chosen from a grid — shown in sidebar and chat avatar
Gradient	4 preset options for the AI panel header
Brief time	When the daily brief is generated — default 07:00
Alert frequency	Minimal Balanced Proactive — controls non-urgent insight volume

7.4 AI Auto-Task Creation

Ada automatically creates and assigns tasks when:

- An incident is raised → "Notify parent — [incident type]," due in 4 hours.
- An invoice is overdue by 7 days → "Chase payment — [parent name]."
- A welfare flag is triggered → "Welfare check — [child name]."
- A missing checkout is detected at close of day.
- Log compliance drops below 70% → "Follow up with caregivers — [room name]."

7.5 AI Plan Gating

PLAN	AI FEATURES
ALL PLANS	NO AI FEATURES

PLAN	AI FEATURES
Nestling Pro	Daily brief, payment risk, welfare alerts, message drafting, financial report narrative
Flourish	All Nestling Pro features + AI Command Center, revenue forecasting, staff intelligence, custom report builder, on-demand refresh, AI report export

8. Modal Specifications

All modals share one shell: fixed width, capped height with a scrollable body, a sticky title header, and a footer with Cancel (secondary) and Submit (primary) buttons.

#	MODAL	TRIGGERED BY	KEY FIELDS
1	ADD CHILD	"+ ENROL CHILD"	FIRST NAME, LAST NAME, DOB, GENDER, BLOOD TYPE, ROOM (SETS FEE PLAN), ALLERGIES, PARENT (SEARCH/CREATE)
2	Log Daily Report	"+ New Log"	Mood emoji, meals (all/half/none), nap duration, toilet/diaper, activity notes, note to parent
3	Raise Incident	"+ Raise Incident"	Child, incident type, severity (Low/Medium/High), time, description, action taken, witnesses
4	New Invoice	"+ New Invoice"	Child (search) — fee plan auto-fills from the child's room, due date, discount, note to parent
5	QR Exception	"Flag Exception"	Person type, person (search), exception type, occurred at, notes
6	Manual Check-In	"+ Manual Check-In"	Person type, person (search), in/out, time, reason (dropdown only)
7	Add Task	"+ Add Task"	Title, description, assigned to (staff search), due date/time, priority
8	New Message	"+ New Message"	To (parent search), subject, body, AI Assist toggle
9	New Announcement	"+ Announcement"	Audience (all/by room), type, subject, body, SMS toggle, push toggle
10	AI Persona Editor	Settings → AI Persona	Name, tagline, tone, emoji picker, gradient picker, brief time, alert frequency
11	Ada Quick View	Ada avatar click	Persona display, quick-action chips, last message
12	Generate Report	"Generate Report"	Report type, date range, charts toggle, format (PDF/Excel/CSV)
13	Incident Detail	Incident row click	Read-only incident detail, action timeline, parent-notification status, Resolve action
14	Announcement Detail	Announcement row click	Read-only detail, delivery stats, re-send action

9. Non-Functional Requirements

9.1 Performance

METRIC	TARGET
DASHBOARD LOAD TIME	<1 SECOND ON NIGERIAN 4G
QR scan response	<500ms from scan to confirmation
Real-time updates	Attendance grid and activity feed update in <1 second
API response	<800ms at p95
Stat card refresh	Every 30 seconds

9.2 Security & Privacy

AREA	REQUIREMENT
AUTHENTICATION	SESSION-BASED WITH A LOCKOUT AFTER REPEATED FAILED ATTEMPTS
Role-based access	All 5 roles enforced server-side on every endpoint
Safeguarding & SEND	DSL/Owner and Manager/Owner access respectively; access is audit-logged; records are immutable
Sensitive data	Bank accounts, certificate numbers, and pension PINs are always masked (last 4 digits) and encrypted at rest
Audit immutability	No update or delete is ever possible on an audit record
Payment custody	CEven never stores card details and never holds parent or crèche funds in a wallet — see §5

9.3 Data Conventions

CONVENTION	SPEC
CURRENCY	₦ — ALL AMOUNTS STORED AS INTEGERS IN KOBO (₦45,000 = 4,500,000 KOBO)
Timestamps	Stored in UTC, displayed in West Africa Time (UTC+1)
Date format	"Apr 11, 2025" — avoids MM/DD vs. DD/MM ambiguity
Child reference ID	CEV-YYYY-NNNN, auto-generated on enrolment

10. Glossary

TERM	MEANING
CRÈCHE	THE CHILDCARE BUSINESS/CUSTOMER USING CEVEN (ALSO CALLED A "NURSERY")
Ada	CEven's embedded AI persona
Fee Plan	The price and billing frequency attached to a room/class, used to generate parent tuition invoices
DSL	Designated Safeguarding Lead — the staff role with access to the confidential safeguarding log
SEND	Special Educational Needs and Disabilities — the confidential register for children needing additional support
Tier	The crèche's own CEven subscription level — Seedling, Nestling Pro, or Flourish

11. Document History

VERSION	CHANGE
1.0	ORIGINAL PRD AS SUPPLIED AT PROJECT KICKOFF.
2.0	Reorganised into this master document; clarified the two distinct money flows (platform subscription vs. room-based tuition) as a dedicated section; corrected the Billing & Payments collection-trend and Monthly Target acceptance criteria; merged Settings' fee-plan and budget configuration into one tab; clarified Inventory & Supplies → Expenses data flow; added a glossary and an open-decisions tracker.

12. Open Product Decisions

These are explicitly **not yet finalized** — do not write acceptance criteria elsewhere in this document that assume a specific resolution to any of these without flagging it.

1. **Add-on billing.** Whether parents can be charged for items/services beyond their room's base fee plan (and if so, who configures and bills for them) is undecided.
2. **AI provider.** Which underlying AI/LLM provider powers Ada has not been selected; this PRD defines required behavior and outputs only, independent of vendor.
3. **Fee Plans & Budgets settings tab.** The combined room-fee/expense-budget configuration described in §30 is the target design; it is not yet finalized in detail.
