

CEven — Wallet System PRD

Product	CEven — Crèche ERP Operating System
Feature	Wallet System (Finance Module)
Document	Product Requirements Document
Version	1.0
Status	Draft
Owner	Product (Adedamola Adewale)
Screen ID	sc-wallet
Plan tier	All Plans

1. Overview

1.1 Purpose

The Wallet is CEven's operational bank account ledger — a single, real-time view of a crèche's money flowing in and out via Paystack. It replaces the need for crèche owners to check their bank app separately; every tuition payment received, every payroll payout, every expense withdrawal is visible in one place with full audit traceability.

1.2 Core Value Proposition

- **Single source of truth** — all crèche cash flow in one ledger, powered by Paystack.
- **Automated reconciliation** — parent invoices paid via Paystack auto-credit the wallet; no manual data entry.
- **Controlled withdrawals** — admins can request payouts, but the owner approves. Withdrawals only go to the registered business bank account.
- **Full audit trail** — every transaction is immutable and logged, satisfying compliance requirements.

1.3 What This Is Not

- This is **not** a replacement for the Expenses or Billing modules. The Wallet sits above them as a payment layer.
- This is **not** an internal bookkeeping ledger for offline cash. Offline transactions are recorded separately in the existing bookkeeping flow.
- This is **not** a multi-wallet system. One wallet per crèche.

2. User Stories

As a Crèche Owner

- I want to see my crèche's real-time balance so I know exactly how much operational money I have.
- I want to see every deposit and withdrawal with timestamps so I can audit cash flow at any time.
- I want to approve or reject withdrawal requests from my admin team so I maintain financial control.
- I want to register my business bank account so payouts go to the right place.
- I want to receive alerts when large transactions occur so I'm never caught off guard.

As a Crèche Admin

- I want to see the wallet balance on my Dashboard so I know our financial position without navigating away.
- I want to request a withdrawal to our registered bank account so I can pay staff, rent, and suppliers.
- I want to see a full transaction history so I can reconcile what I've deposited or withdrawn.
- I want to filter transactions by type, date, or category so I can find specific entries quickly.

As a CEven Super Admin

- I want to override the business-account-only rule for crèches that don't have a business account, so they can still use the wallet feature.

3. Wallet Onboarding (KYC/KYB)

Before a crèche can use the wallet, the **Owner** must complete a one-time onboarding flow. This is triggered when any user first navigates to the Wallet screen or clicks a wallet-related action.

3.1 Onboarding Flow (3-Step Wizard)

Step 1 — Business Information

Field	Required	Notes
Business Name	Yes	Auto-filled from crèche profile; editable
RC Number (Optional)	No	If available; skipped if personal account
Business Type	Yes	Radio: Business Account / Personal Account
BVN	Yes	11-digit; validated on entry

Step 2 — Bank Account Details

Field	Required	Notes
Bank Name	Yes	Dropdown of Nigerian banks (Paystack bank list)
Account Number	Yes	10-digit; triggers Paystack account name fetch on blur
Account Name	Yes (auto)	Auto-fetched from Paystack after account number + bank are entered
Account Type	Yes (auto)	Savings / Current — auto-fetched

- **Name Matching Rule:** After auto-fetch, the system checks for ≥50% string resemblance between the fetched account name and the crèche profile name (fuzzy match). If it fails, a warning banner appears: *"The account name does not match your crèche name. Withdrawals to personal accounts require CEven support approval."* The user can still proceed but the account is flagged as "personal" in the system.

Step 3 — OTP Verification

Field	Required	Notes
OTP	Yes	6-digit code sent to the Owner's registered phone number via Paystack

- On successful OTP verification, the wallet is activated.
- If the Owner abandons mid-flow, the wallet shows a persistent **"Complete Setup"** banner on subsequent visits. The wizard resumes from the last incomplete step.

3.2 Onboarding States

State	Behaviour
Not Started	Wallet screen shows a full-page onboarding prompt with a "Get Started" CTA.
In Progress	Banner shows current step (e.g. "Step 2 of 3 — Bank Details"). Wizard resumes from last step.
Completed	Wallet is fully active. Onboarding prompt never reappears.

Failed / Rejected

If OTP fails or Paystack rejects the account, show error with "Retry" CTA.

4. Wallet Screen (`sc-wallet`)

4.1 Layout

The Wallet is a dedicated screen within the Finance module, positioned above the existing Billing & Payments / Expenses / Financial Reports tabs.

WALLET

Balance Card

Available Balance: ₦1,245,000.00

Pending In: ₦85,000 | Pending Out: ₦120,000

Total Out

₦1,205,000

This Month

Net Flow

+₦1,245,000

This Month

Transaction History

Filters: [All ▼] [Category ▼] [Date Range] [Search] |

Date	Type	Category	Description	Amount	Status
...	...	...	...	...	...

Bank Account

GTBank – ••••4567 (Business Account)

Account Name: Greg Creche Limited

[Update Bank Details]

4.2 Balance Card

Element	Spec
Available Balance	Real-time balance (credits - debits). Displayed in ₦ with commas.
Pending In	Sum of deposits awaiting Paystack settlement (T+1). Shown as informational.
Pending Out	Sum of withdrawal requests approved but not yet processed by Paystack.
Deposit CTA	Opens deposit flow (see §5.1).
Withdraw CTA	Opens withdrawal flow (see §5.2).

4.3 Summary Stat Cards (3)

Card	Calculation
Total In	Sum of all credited deposits for the current calendar month.
Total Out	Sum of all debited withdrawals for the current calendar month.
Net Flow	Total In minus Total Out for the current calendar month. Green if positive, red if negative.

4.4 Transaction History Table

Column	Description
Date & Time	Format: DD MMM YYYY, HH:mm
Type	Badge: Credit (green) / Debit (red)
Category	Sub-category badge (see §6)
Description	Human-readable: e.g. "Payment from Mrs. Okafor — Tuition (September)"
Amount	₦ amount with + (credit) or - (debit) prefix
Status	Completed (green) / Pending (amber) / Failed (red)
Actions	Kebab menu: View Details, Download Receipt

Filters:

- Type filter: All / Credit / Debit
- Category filter: All / Tuition / Admission Fee / Payroll / Rent / Supplies / Utilities / Refund / Other
- Date range picker
- Search by description or transaction reference

Pagination: 20 transactions per page.

4.5 Bank Account Card

Element	Spec
Bank Name	Displayed (e.g. "GTBank")
Account Number	Masked (e.g. "....4567")
Account Name	Full name as verified
Account Type Badge	Business Account (green) / Personal Account (amber)
Update CTA	Opens bank details update flow (see §5.3)

5. Wallet Actions

5.1 Deposit Flow

Deposits are **automated** — the admin does not manually initiate them. When a parent pays an invoice via Paystack, the wallet is auto-credited.

However, the deposit flow is triggered in two places:

1. **From the Wallet screen** — "Deposit" CTA opens a modal that shows:

- A message: *"Deposits are automatic. When a parent pays an invoice via Paystack, funds are credited to your wallet automatically."*
- A CTA: "Go to Billing" → navigates to Billing & Payments screen.
- No manual deposit entry form (offline deposits are bookkeeping, not wallet).

2. **From the Dashboard quick actions or Billing screen** — when a parent makes a Paystack payment, the wallet is credited automatically in the background.

Auto-Credit Logic:

- When an invoice status changes to "Paid" via Paystack, the wallet is credited with the invoice amount minus Paystack transaction fee.
- The transaction is logged with: date, amount, fee deducted, net amount, parent name, invoice reference, category = "Tuition" (or "Admission Fee" if applicable).
- Pending balance updates immediately; available balance updates after Paystack settlement (T+1).

5.2 Withdrawal Flow

Admins can request withdrawals. The flow:

Step 1 — Enter Amount

- Admin enters the withdrawal amount in ₦.
- Minimum balance check: withdrawal cannot reduce the available balance below ₦1,000.
- If insufficient funds, show: *"Insufficient balance. Available: ₦X,XXX"*
- Show the Paystack transaction fee for this amount (if applicable).

Step 2 — Select Destination

- Dropdown shows the registered primary bank account.
- If the account is a Personal Account, show a notice: *"This is a personal account. Business accounts are recommended for withdrawals."*
- Admin confirms the destination account.

Step 3 — Review & Confirm

- Summary: Amount, Destination (masked account number), Fee, Net amount to be received.
- Admin enters a note/reason (optional).
- "Confirm Withdrawal" button → submits the withdrawal request.

Post-Submission:

- The withdrawal is logged as a pending debit in the transaction history.
- The owner receives a notification (in-app + optional SMS) with the withdrawal details.
- The owner can approve or reject from the notification or the Wallet screen.
- On approval: Paystack Transfer is initiated. Status changes to "Processing" → "Completed" (or "Failed" if Paystack rejects).
- On rejection: Status changes to "Rejected" with the owner's rejection reason.

5.3 Update Bank Details Flow

The owner can update the registered bank account at any time.

Step 1 — Enter New Details

Field	Required	Notes
Bank Name	Yes	Dropdown of Nigerian banks
Account Number	Yes	10-digit; triggers auto-fetch
Account Name	Yes (auto)	Auto-fetched from Paystack

RC Number	No	If business account
-----------	----	---------------------

Step 2 — Name Matching

- System checks $\geq 50\%$ resemblance between fetched account name and crèche profile name.
- If match passes: proceed to Step 3.
- If match fails: warning banner — *"Account name does not match crèche name. This account will be flagged as personal. Business account updates are recommended."* User can proceed or go back.

Step 3 — OTP Verification

- 6-digit OTP sent to the Owner's registered phone.
- On success: bank details are updated. Old account is retained in transaction history for reference.

6. Transaction Categories

Deposits (Credits)

Category	Trigger
Tuition	Parent pays a tuition invoice via Paystack
Admission Fee	Parent pays an admission/enrolment fee via Paystack
External Funding	Manual record of funds received outside Paystack (e.g. grants, donations) — available to Super Admin or Owner only

Withdrawals (Debits)

Category	Trigger
Payroll	Staff salary payment via wallet
Rent	Crèche facility rent payment
Supplies	Purchase of supplies, equipment, consumables
Utilities	Electricity, water, internet, etc.
Refund	Refund to a parent (tied to an invoice)
Other	Any withdrawal not fitting the above categories

7. Approval System

7.1 Roles & Permissions

Role	Can Request Withdrawal	Can Approve Withdrawal	Can Update Bank Details
Owner	Yes	Auto-approved (own requests)	Yes
Admin	Yes	No (sends to Owner for approval)	No
Caregiver	No	No	No
CEven Super Admin	N/A	Can override to allow personal-account withdrawals	Can assist with onboarding

7.2 Approval Flow

1. Admin submits withdrawal request → status = **"Pending Approval"**.
2. Owner receives in-app notification (and optional SMS) with request details.
3. Owner can:
 - **Approve** → status = **"Processing"** → Paystack Transfer initiated.
 - **Reject** → status = **"Rejected"** → Admin notified with rejection reason.
4. If unactioned for 48 hours, the request expires and status = **"Expired"**.

7.3 Business Account Rule

- The payout account **must** be a registered business account that matches the crèche name (≥50% resemblance).
 - If the account is flagged as "Personal" (name mismatch), the system warns the admin: *"Withdrawals to personal accounts require CEven support approval."*
 - In this case, the withdrawal is held in **"Pending Review"** status until CEven Super Admin approves it externally (offline process — not in-app).
-

8. Paystack Integration

8.1 Deposit Integration

Parameter	Spec
Trigger	Invoice marked as "Paid" via Paystack
Credit	Invoice amount minus Paystack fee
Settlement	T+1 (Paystack default)
Pending Balance	Updates immediately on payment confirmation
Available Balance	Updates after settlement (T+1)
Fee Handling	Paystack fee is auto-deducted and logged as a line item on the transaction

8.2 Withdrawal Integration

Parameter	Spec
API	Paystack Transfer API
Trigger	Owner approves withdrawal request
Destination	Registered primary bank account
Processing	1-24 hours (Paystack SLA)
Status Updates	Processing → Completed / Failed
Failure Handling	Funds returned to wallet; admin and owner notified; status = "Failed" with reason

8.3 Account Verification

Parameter	Spec
API	Paystack Bank Account Verification (name fetch)
Trigger	Admin enters account number + bank, on blur
Output	Account name, account type

Name Matching	≥50% string resemblance to crèche profile name
---------------	--

8.4 Settlement & Balance Display

- **Pending In** = sum of Paystack payments received but not yet settled (T+1).
- **Pending Out** = sum of approved withdrawals awaiting Paystack transfer completion.
- **Available Balance** = settled balance (can be withdrawn).
- The dashboard shows: *"Transfer request sent"* on submission, *"Transfer completed"* on success. No T+1 terminology exposed to the user.

9. Dashboard Integration

The Wallet does **not** appear as a KPI card on the main Dashboard. However:

- The **Finance stat cards** on the Dashboard should include wallet balance as a reference point (or link to the Wallet screen).
- The Wallet screen is accessible from the Finance sidebar group, positioned above the existing tabs.

10. Plan Tier Gating

Tier	Wallet Access
Seedling	✔ Full wallet access (deposits, withdrawals, transaction history)
Nestling Pro	✔ Full wallet access
Flourish	✔ Full wallet access

The wallet is available on **All Plans** — it is a core financial feature, not a premium AI feature.

11. Security & Compliance

Requirement	Implementation
OTP Verification	Required for wallet onboarding and bank detail updates. 6-digit code via Paystack.
Name Matching	≥50% resemblance check between bank account name and crèche profile name.
Role-Based Access	Only Owner can approve withdrawals and update bank details. Admins can only request.
Audit Trail	Every wallet transaction (deposit, withdrawal, approval, rejection, bank update) is logged immutably in the Audit Trail module.
No Personal Accounts for Withdrawals	Default rule: payouts only to business accounts. Personal accounts require Super Admin override.
Minimum Balance	₦1,000 floor — withdrawals cannot reduce balance below this.
Transaction Fee Logging	Paystack fees are auto-deducted and logged as separate line items for transparency.

12. Edge Cases & Error Handling

Scenario	Behaviour
----------	-----------

Insufficient balance	Withdrawal blocked. Show: <i>"Insufficient balance. Available: ₦X,XXX"</i>
Below minimum balance	Withdrawal blocked. Show: <i>"Minimum balance of ₦1,000 must be maintained."</i>
Paystack payment fails	Wallet not credited. Invoice status remains "Pending". User notified.
Paystack transfer fails	Funds returned to wallet. Status = "Failed". Admin and Owner notified with reason.
Owner rejects withdrawal	Status = "Rejected". Admin notified with rejection reason.
Withdrawal expires (48h unactioned)	Status = "Expired". Funds remain in wallet. Admin notified.
Bank account name mismatch	Warning banner. Account flagged as "Personal". Withdrawals held for Super Admin review.
OTP fails 3 times	Lock wallet actions for 15 minutes. Show: <i>"Too many attempts. Try again in 15 minutes."</i>
Owner abandons onboarding	Wallet shows "Complete Setup" banner. Wizard resumes from last step.
Paystack outage	Wallet shows cached balance. Deposits/withdrawals show "Pending" with a note: <i>"Payments may take longer to process. We'll notify you when complete."</i>

13. Notifications

Event	Recipient	Channel	Message
Deposit credited	Owner, Admin	In-app	<i>"₦X,XXX deposited into wallet from [Parent Name] — Tuition"</i>
Withdrawal requested	Owner	In-app + SMS	<i>"New withdrawal request: ₦X,XXX to [Bank]XXXX. Approve or reject."</i>
Withdrawal approved	Admin	In-app	<i>"Your withdrawal of ₦X,XXX has been approved and is being processed."</i>
Withdrawal rejected	Admin	In-app	<i>"Your withdrawal of ₦X,XXX was rejected. Reason: [reason]"</i>
Withdrawal completed	Owner, Admin	In-app	<i>"₦X,XXX transfer completed to [Bank]XXXX"</i>
Withdrawal failed	Owner, Admin	In-app	<i>"₦X,XXX transfer failed. Reason: [reason]. Funds returned to wallet."</i>
Low balance warning	Owner	In-app	<i>"Wallet balance is below ₦10,000. Consider making a deposit."</i>
Bank details updated	Owner	In-app	<i>"Bank account updated to [Bank]XXXX"</i>

14. Acceptance Criteria (Screen-Level)

- ☐ Wallet screen is accessible from the Finance sidebar group.
- ☐ Onboarding wizard (3 steps) blocks wallet access until completed.
- ☐ Onboarding wizard resumes from last step if abandoned.

- ☐ Balance card shows available balance, pending in, pending out.
- ☐ Deposit CTA explains automated flow and links to Billing.
- ☐ Withdrawal flow: amount entry → destination selection → review & confirm.
- ☐ Minimum balance of ₦1,000 enforced on withdrawals.
- ☐ Withdrawal requests send notification to Owner for approval.
- ☐ Owner can approve/reject from notification or Wallet screen.
- ☐ Rejected withdrawals show the rejection reason.
- ☐ Expired withdrawals (48h) auto-expire and notify admin.
- ☐ Bank account details card shows masked account number, name, type badge.
- ☐ Bank update flow: enter details → name match check → OTP verification.
- ☐ ≥50% name resemblance check between account name and crèche profile.
- ☐ Personal account flag triggers Super Admin review hold.
- ☐ Transaction history table with filters (type, category, date, search).
- ☐ Transactions show: date, type badge, category, description, amount, status.
- ☐ Pagination at 20 transactions per page.
- ☐ 3 summary stat cards: Total In, Total Out, Net Flow (current month).
- ☐ Paystack fees auto-deducted and logged on each transaction.
- ☐ All wallet actions logged to the Audit Trail.
- ☐ OTP verification for onboarding and bank detail updates.
- ☐ 3-attempt OTP lockout with 15-minute cooldown.
- ☐ Responsive at 1440px and 768px.
- ☐ No console errors.

15. Dependencies

Dependency	Status	Impact
Paystack SDK / API integration	Required	Core — deposits, withdrawals, account verification all depend on Paystack
Crèche profile data (business name)	Required	Used for name-matching rule
Invoice/Billing module	Required	Triggers auto-credit on payment
Owner phone number (for OTP)	Required	Must be captured during crèche setup
Audit Trail module	Required	All transactions logged here

16. Future Enhancements (Out of Scope for v1)

- Multiple wallets per crèche (e.g. "Operations", "Salary", "Petty Cash").
- Scheduled/recurring withdrawals (e.g. monthly payroll auto-withdrawal).
- Wallet-to-wallet transfers between crèches (for multi-branch owners).
- Real-time Paystack webhooks for instant balance updates (instead of T+1 polling).
- Budget allocation per category with spending limits.
- Export transaction history as CSV/PDF.
- Paystack virtual account numbers for direct bank transfers into wallet.
